

Ubuntu Bridge Initiative · Cybersecurity Internship · Cohort 1 · Stage 3 Capstone

Editable template — Deliverable 4 of 5: MITRE ATT&CK technique map. You map each event in your timeline to a specific ATT&CK technique (and sub-technique where it applies). Browse attack.mitre.org directly to get the IDs right. Edit in Google Docs or Microsoft Word (keep it as a table). Replace every [BRACKETED] prompt and delete every grey guidance line before you submit.

Deliverable 4 — MITRE ATT&CK technique map

Before you start

- Work from your D2 timeline: every adversary action in it should map to a technique here. If a timeline event has no technique, ask whether it is really adversary behaviour.
- Use **specific** technique IDs — Txxxx, and the **sub-technique** Txxxx.xxx where one fits (a bare tactic name is not enough). Confirm each ID on attack.mitre.org rather than from memory.
- One row per behaviour, with the evidence line that supports it. The grader checks that the technique actually matches what the evidence shows — not just a plausible-sounding ID.

This is a scaffold, not an answer key. You choose and justify the techniques from your own evidence.

What you submit

A document (attack-mapping) with one table mapping the incident's behaviours to ATT&CK, covering the tactics from initial access through exfiltration.

First line of your document:

Stage 3 · ATT&CK map · [Your Full Name] · [UBI-2026-####]

The mapping table

Tactic	Technique ID + name	Sub-technique (if any)	Adversary behaviour observed	Evidence (source · line)
Initial Access	[Txxxx — name]	[Txxxx.xxx]	[what the attacker did]	[`03-syslog.txt` line]
Privilege Escalation	[]	[]	[]	[]
Persistence	[]	[]	[]	[]
Command & Control	[]	[]	[]	[]
Exfiltration	[]	[]	[]	[]

Add rows for any other tactic your evidence supports (Discovery, Defense Evasion, etc.). Every row needs an evidence cell. Map behaviour to technique — do not list techniques you cannot evidence.

Where the marks are won (what we look for)

- **Specific IDs, verified on attack.mitre.org** — Txxxx and the sub-technique where it applies, not

just "Persistence" or a wrong/aged ID.

- **Technique matches the evidence** — the behaviour in the row genuinely is that technique. A plausible ID that does not match what the log shows loses the row.
- **Coverage of the chain** — initial access, privilege escalation, persistence, C2, and exfiltration are all represented.
- **Traceability** — each row cites the same evidence that backs the corresponding timeline event.

Before you submit, confirm

- [] First line is the Stage 3 · ATT&CK map · Name · Code identity line.
- [] Every row has a specific technique ID (and sub-technique where one fits) plus an evidence line.
- [] The major tactics (initial access !' exfiltration) are all covered.
- [] Each technique genuinely matches the behaviour the evidence shows.
- [] No [BRACKETED] prompts or grey guidance lines remain.
